experiment1 → channel x → .xml files

folder_raw_data → experiment2 → channel x → .xml files

etc

dir_pre

Names don't need to be specified in config file. Program will loop through all the folders it finds in folder_raw_data

that's what you get directly from fozzie

folder_graphics → folder_raw_data

not used at the moment because GUI clashed with plotting

folder_processed → folder_raw_data → experiment1

experiment2

etc

will contain .tar.gzipped raw data and the raw and processed netcdf files

*Blue letters: made by the program;   black letters: has to be made by user
